PROJECT DETAILS

Lake St. Martin Reach 3

This project's work involved construction of the Lake St. Martin Emergency Channel "Reach 3", from Buffalo Creek to West of Lake Winnipeg. The project included construction of access, channel construction, dike construction and inlet cofferdam construction.

Major Items of Work:

- 790,000 cubic meters of composite excavation
- 60,000 cubic meters of solid rock excavation
- Erosion & Sediment Control

Hugh Munro Construction was awarded the Manitoba Infrastructure and Transportation award for Excellence for this project. The award recognizes the excellence in construction of Manitoba Highways in terms of overall appearance, adherence to specification and design criteria, efficient project progression and general workmanship and finish.
